SINGLET®
Long-Acting Tablets
Decongestant-Antihistamine-Analgesic

BRIEF SUMMARY

INDICATIONS AND USAGE: For the relief of multiple symptoms of nasal and eustachian tube congestion, sneezing, runny nose, watery eyes, myalgia, headache and fever associated with colds and other viral infections, sinusitis, influenza, and seasonal and perennial nasal allergies.

May be given concomitantly, when indicated, with antibiotics.

CONTRAINDICATIONS: Patients with severe hypertension, severe coronary artery disease, on MAO inhibitor therapy, narrow angle glaucoma, urinary retention, peptic ulcer, during an asthmatic attack, and seriously impaired liver and kidney function, children under 12 years, nursing mothers and hypersensitivity to its ingredients.

WARNING: If sympathomimetic amines are used in patients with hypertension, diabetes mellitus, ischemic heart disease, hyperthyroidism, increased intraocular pressure, and prostatic hypertrophy, judicious caution should be exercised (see CONTRAINDICATIONS).

Use in Elderly: The elderly (60 years and older) are more likely to have adverse reactions to sympathomimetics. Overdosage of sympathomimetics in this age group may cause hallucinations, convulsions, CNS depression, and death.

PRECAUTIONS: Patients with diabetes, hypertension, cardiovascular disease, hyperreactivity to ephedrine or decreased respiratory drive (see CONTRAINDICATIONS).

Drug Interactions: MAO inhibitors and beta adrenergic blockers increase the effect of sympathomimetics and the anticholinergic (drying) effects of antihistamines. Sympathomimetics may reduce the antihypertensive effects of methyldopa, mecamylamine, reserpine and veratrum alkaloids. Concomitant use of antihistamines with alcohol, tricyclic antidepressants, barbiturates and other CNS depressants may have an additive effect.

Pregnancy Category C: Animal reproduction studies have not been conducted with SINGLET. It is also not known whether SINGLET can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. SINGLET may be given to a pregnant woman only if clearly needed.

Nursing Mothers: Because of the potential for serious adverse reactions in nursing infants from sympathomimetic amines, phenylephrine is contraindicated in nursing mothers.

ADVERSE REACTIONS: Individuals hyperreactive to phenylephrine may display ephedrine-like reactions such as tachycardia, palpitation, headache, dizziness, or nausea. Sympathomimetic drugs have been associated with certain untoward reactions including fear, anxiety, tenseness, restlessness, tremor, weakness, pallor, respiratory difficulty, dysuria, insomnia, hallucinations, convulsions, CNS depression, arrhythmias, and cardiovascular collapse with hypotension. Possible side effects of antihistamines are drowsiness, restlessness, dizziness, weakness, dry mouth, anorexia, nausea, headache, nervousness, blurring of vision, heartburn, dysuria and very rarely dermatitis.

Patient idiosyncrasy to adrenergic agents may be manifested by insomnia, dizziness, weakness, tremor or arrhythmias.

OVERDOSAGE: Pressor amines should be used with great caution in the presence of phenylephrine. Patients with signs of stimulation should be treated conservatively. Acetaminophen in massive overdosage has caused liver damage and fatal hepatic necrosis.

Recent studies have indicated that n-acetylcysteine may prevent hepatic damage if given within 24 hours of acetaminophen ingestion. Since n-acetylcysteine has not yet been approved for use as an antidotal, except as an investigational drug, consult the Rocky Mountain Poison Center (toll-free number (800) 525-6115)[1].

DOSAGE AND ADMINISTRATION: Adults: one tablet three times daily. In severe cases, a fourth dose may be indicated. The interval between doses should not be less than six hours. (NOTE: This product is specifically formulated to provide therapeutic effect for up to eight hours. Do not break or crush the tablets.)

CAUTION: Federal law prohibits dispensing without prescription.

[1] Peterson RG and Rumack BH: Toxicity of acetaminophen overdose. JACEP 7:5, 202, 1978.
Glynn JP and Kendall SE: Lancet pp 1147-48, May 17, 1975.

(See package literature for complete prescribing information.)

E N T Provider

FHP, one of the nation's leading health maintenance organizations, is seeking a **Board-certified (or eligible) Otorhinolaryngologist** to join our Southern California medical staff.

FHP offers an opportunity to practice quality medicine in a progressive group practice environment.

FHP physicians receive:

- Competitive salary
- Medical/dental care
- Vacations
- Complete malpractice coverage
- Paid sick leave
- Disability insurance
- Post-graduate time off
- Retirement plan
- Paid post-graduate tuition
- Life insurance
- Tax-deferred compensation program

For further information about immediate opportunities or future openings in all specialties, please write or call toll-free to Professional Staffing. Outside California call 1-800-446-2255, within California call 1-800-336-2255.
